

Grade 1

Lesson 1: AIR & WATER

## Clean Air Detective: Investigating Air Pollution

### Homework

#### CREATURE AIR CATCHER DIRECTIONS

1. Place tape over the cutout area on the creature's mouth. IMPORTANT: Place the tape on the backside of the creature so that the sticky side of the tape is facing the front – or colored side – of the creature.
2. Hang each creature in the location drawn, or written, on that creature.
3. When hanging a creature outside, make sure that it will be protected from rain or snow.
4. After one week, take down the creatures.
5. Place a piece of CLEAR tape over the sticky side of the tape. This will prevent the tape from sticking to other objects.
6. Bring the creatures back to school.
